

Leverage Adjustment Description

CPT International leverage adjustment policy will be adjusted to the corresponding leverage level in strict accordance with the account equity.

Note: The leverage here refers to the leverage of the account, which only affects the trading of foreign exchange and precious metals. The corresponding relationship between the current amount of funds and leverage is shown in the following table:

Real-time net worth (Dollar)	Leverage multiple
0 - 20,000 (Excluded)	1:500
20,000 (Contain) - 50,000 (Excluded)	1:400
50,000 (Contain) - 100,000 (Excluded)	1:300
100,000 (Contain) - 200,000 (Excluded)	1:200
200,000 (Contain) - 1,000,000 (Excluded)	1:100
1,000,000 and above (Contain)	1:50

Example of adjustment rules

Assuming an initial deposit of \$10,000 for an account, the initial leverage is 1:500. After the profit of the transaction becomes \$20,000, CPT International will adjust the leverage of the account to 1:400. If the net value of the account changes to \$19,999.99 on the next system scan, the leverage will be reverted to 1:500. Since all adjustment leverage operations are performed manually based on the account equity, CPT International recommends that the trader control the trading position to avoid the account being forced to close due to adjustment leverage. CPT International assumes no responsibility for the loss of forced liquidation caused by the adjustment of the leverage after the change in net worth.

Market Manipulation Prohibited

Traders are prohibited from engaging in Market Manipulation.

Market Manipulation of any kind is strictly prohibited. Market Manipulation is defined as actions taken by any market participant or a person acting in concert with a participant which are intended to:
 I) Deceive or mislead other Traders; ii) Artificially control or manipulate the price or trading volume of an Asset; or iii) Aid, abet, enable, finance, support, or endorse either of the above. This may include actions on Coinbase Pro/Exchange and/or outside of Coinbase Pro/Exchange.

Market Manipulation specifically includes, without limitation: front-running, wash trading, spoofing, layering, churning, and quote stuffing.
